## HEAR

### Cubista, Dancer and Vocalist

Three beautiful examples of marble surrounding music speakers.

This innovative sound technology is based on the Audio wave diffusion from surfaces, that is what normally happen in conventional music instruments like guitar, piano and violin.

Marble can therefore become an amazing quality speaker, granting depth of audio 360 degrees with excellent quality and long distance persistent sound.

#### Cubista

Surrounding music speaker in Napoleon marble. Leds integrated and diffused light

In a lounge, when set in “All-in-one” or “Alone” mode, and placed in the middle of the room, it spreads the music allowing everywhere an excellent acoustic perception. It is also useful as flat support or as led lamp. In an audio room or in a big salon, if configured in Dancers mode, it provides the best sound quality, thanks to the total absence of reflections and reverberations and to the high energy produced by the flat panels.

In a garden or in a wide open space, CUBISTA® is not afraid of the rain and it has a very high performance thanks to its long distance emission special feature.  
Customizable in all sorts of marbles and finishes.

### Dancer

Surrounding music speakers. Napoleon marble.

### Vocalist

Wall plate back-lighted speaker, square-shaped , in Havana Onyx

# TOUCH & FEEL

## Hot & Cold

Heated or refrigerated tables for the maximum comfort of the laziest

Example of a **heated surface for buffet**. High temperatures (266° F), time coming on very short, with invisible technology.

Example of a **refrigerated system** with gas and air compressor, low temperatures (- 22/40° F) use for custom buffet tables or coffee tables.

Warm need cool, and all of us, in summer, like laying lazily in relax, so when we wish to drink something cool we don't feel like standing up from our chaise longue. Zunino Marmi has the solution, by proposing precious refrigerated tables in different stones and granits.

A refrigerating structure, covered with lightened marble, allows keeping food and drinks fresh, just by leaving them on the top of the table. Functionality and elegance, technology and creativity in one solution.

The first version of this proposals have a traditional charging system (electricity), while an advanced version propose an "eco-friendly" model, where the energy is supplied by solar panels.

Needless to say, as all the other proposals of Zunino Marmi, the warm and cool tables that are here shown in Absolute Black Granit are totally customizable: it is possible to choose the marble, the finish and the size that are more suitable to our taste and rooms.

## Relonga

Salt waterproof marble and leather chaise longue in carbon fiber structure. 35 kgs weight. Stereo set. Solar cells, electricity or battery power.

The professionalism and creativity of Zunino Marmi craftsmen succeeded in make light what is normally heavy, curved what is sharp and, from this year, warm what is traditionally cold through the production of a comfortable chaise longue in lightened Walnut Travertin.

30 kilos weight and sinuous curves in a thin slab of few millimeters of Travertin, placed on an aluminum honeycomb, fixed on a carbonfibre structure. A further plus is represented by the two wheels inserted "secretly" in the front side, in order to help the chair's displacement. The unexpected comfort of the carefully worked stone is made even softer by its leather inserts, which are highly weatherproof. But there is more... the high-tech version of the chaise longue, provided with a solar panel allowing the connection to a sound source where it is possible to connect the MP3 reader to comfortably listen to the preferred music, thanks to micro-speakers, unnoticeably inserted in the marble structure. Not only aesthetics, lightness and comfort: you can forget it outside since it requires no maintenance. Is there anything more resistant than the stone?

The features of this innovative chaise longue make it suitable to several diverse locations: in yachts, around a swimming pool, in spas, in sunny terraces and, great novelty, in shadowy areas, since Zunino has just developed a brand new model in heated marble.

## Marble and leather seats

Benches-containers in light Jerusalem Stone and waterproof leather

# SEE

## Marmoluce

Luminous wall panels, marble and methacrylate made, sizes up to 3.000 x 1.500 mm. Leds lighting . Here shown in Lillawhite marble

A clever solution gathering the functional and the aesthetic aspect with the result of amazing light games. Marmoluce exploits the transparence of white marbles and the thickness of the slab creating luminous surfaces that can be used in a wide variety of rooms: corridors, stairs, showers...

## Oto – Axa

Wall or roof lamps, marble and carbonium fiber made. Leds lighting. Stainless steel . Here shown in Elegant Brown marble.

# Tamure

Marble table, aluminium lightened. Stainless steel frame
